

Dear UNITA members,

The USMB Teaching and Learning center, APPRENDRE, is currently designing an Educational Event based on **STEAM approaches** in higher education.

The **STEAM STAFF WEEK** taking place in Chambéry on **October 15th and 16th** will aim to provide a shared understanding of what might be achieved by STEAM in Higher Education through identifying foundational competencies. We will focus on the fundamental principles and the design methodology of STEAM, the appropriateness of interdisciplinarity in this educational approach and its benefits in higher education.

A combination of theoretical plenary sessions, practical workshops, round-table sessions and experience feedback will enable **university teachers and educational developers** to develop the skills needed to effectively integrate STEAM, while aligning with the already institutionalised competency-based approach.

Language of instruction: UNITA languages

Save this date, we will be delighted to count on your participation!

A more detailed programme together with the registration form will be sent in the coming months.

Please do not hesitate to spread the initiative among all colleagues who might be interested.

Kind regards,
STEAM organization group
