http://staffmobility.eu/staffweek/ghent-university-library-staff-week-3

Ghent University Library is hosting in collaboration with HOGENT and Artevelde University College its third international staff week. Between March, 31st and April 4th, we welcome library staff and information professionals from all over Europe for five exciting days of workshops, discussions and discoveries. During the program, you will be working together with other participants on a podcast or a knowledge clip (on Science communication, A.I. tools for literature research, Advancing open science publications or Promoting cultural heritage in libraries). Interested? Apply before 31 December and indicate what input you can provide during the staff week. All candidates will be notified on February, 1st at the latest. Places are limited.

More info and registration link in the attached pdf.

UGent University Library
3RD INTERNATIONAL STAFF WEEK
31/03/2025—04/04/2025

Join our third International Staff Week in Ghent (Belgium)

→ Register before 31/12/2024 via this link:
https://tinyurl.com/ISW3-2025

→ Registration fee €100

→ Choose two topics you wish to make a podcast or knowledge clip on, coworking with other participants:

Science Communication: Bridging the Gap Between Research and Public Understanding
This session focuses on developing skills for effectively communicating research and scientific ideas to non-expert audiences. Participants will learn practical strategies for crafting a compelling key message, understanding their target audience, and choosing the most effective communication channels. Additionally, the session explores the strategic use of social media and academic networks, emphasizing their advantages and potential challenges.

More than ChatGPT: Explore AI tools for literature research
Discover the world of AI tools for literature research during our interactive session! What is ChatGPT and what are the do's and don'ts when using this tool to support your literature research? Also, discover other valuable AI tools that can enrich your research. These questions will be central to our session, where we highlight AI tools with the concept of the "AI sandwich" in mind. In this approach, AI acts as a middle layer between human input and the final decisions, leveraging the synergy between human expertise and AI technology.

Advancing open source publications in libraries
In the evolving landscape of academic research, librarians are uniquely positioned to champion the principles of open science. This presentation explores the pivotal role librarians can play in advancing open science, with a particular focus on the establishment and management of open access journals.

Promoting cultural heritage in libraries
Academic libraries play a crucial role in preserving and showcasing diverse cultures, making them accessible to students and researchers. By curating special collections, organizing cultural events, and collaborating with local communities, libraries can foster a deeper understanding of global heritage. Participants will engage in discussions about best practices, share successful initiatives, and explore digital tools that enhance cultural outreach.
